TECHNICAL DATA SHEET

EN 1176

+ 1 year

133 users

1552 x 705 x 660 cm.

150-200 cm.

109,70 m²

Structural posts Aluminium EN-AW 6063, anodized

Panels HDPE (High-density polyethylene) 13 and 19 mm

Platforms and steps Phenolic nonslip plywood

Sliding sole Stainless steel: Straight tube 200cm + open straight 150cm

Bars Steel zinc-plated and powder-coated / stainless

Ropes Armed rope with steel core and multiple PP strings

Creep tube Polyethylene Ø80 cm

4 px.

35 h.

The PIRATE'S GALLEON is a themed multi-activity play structure where children become adventurers on the high seas and let their imagination run free.

It attracts a wide age range and it is ideal for the development of social and emotional abilities (communication, role play, etc.) and of physical abilities (motor skills, coordination, agility, strength,...).

Many accessible activities, sensorial experiences and different levels of challenge make the equipment inclusive. Thanks to its spacious dimensions and great variety of activity opportunities, many children can play simultaneously.

The materials employed for the production of the Pirate's Galleon are of high quality and strong resistance and imply low maintenance and long lifetime.

Structural posts of aluminium EN-AW6063 with anodized finishing. Bars of zinc-plated and powder-coated and of stainless steel. Platforms of phenolic nonslip plywood with protective layer anti-humidity. Extensive panels of HDPE (high density polyethylene), resistant to impacts, to frequent and exhaustive usage, to chemical agents, which allows graffiti elimination without damaging the surface and with UV protection. Slides of stainless steel. On demand, they can also be delivered in polyethylene / glass-fibre reinforced polyester. Vandal-proof armed ropes of polypropylene strings with steel core. Installation with ground sleeves of hot-dip galvanized steel. Screws of stainless steel.

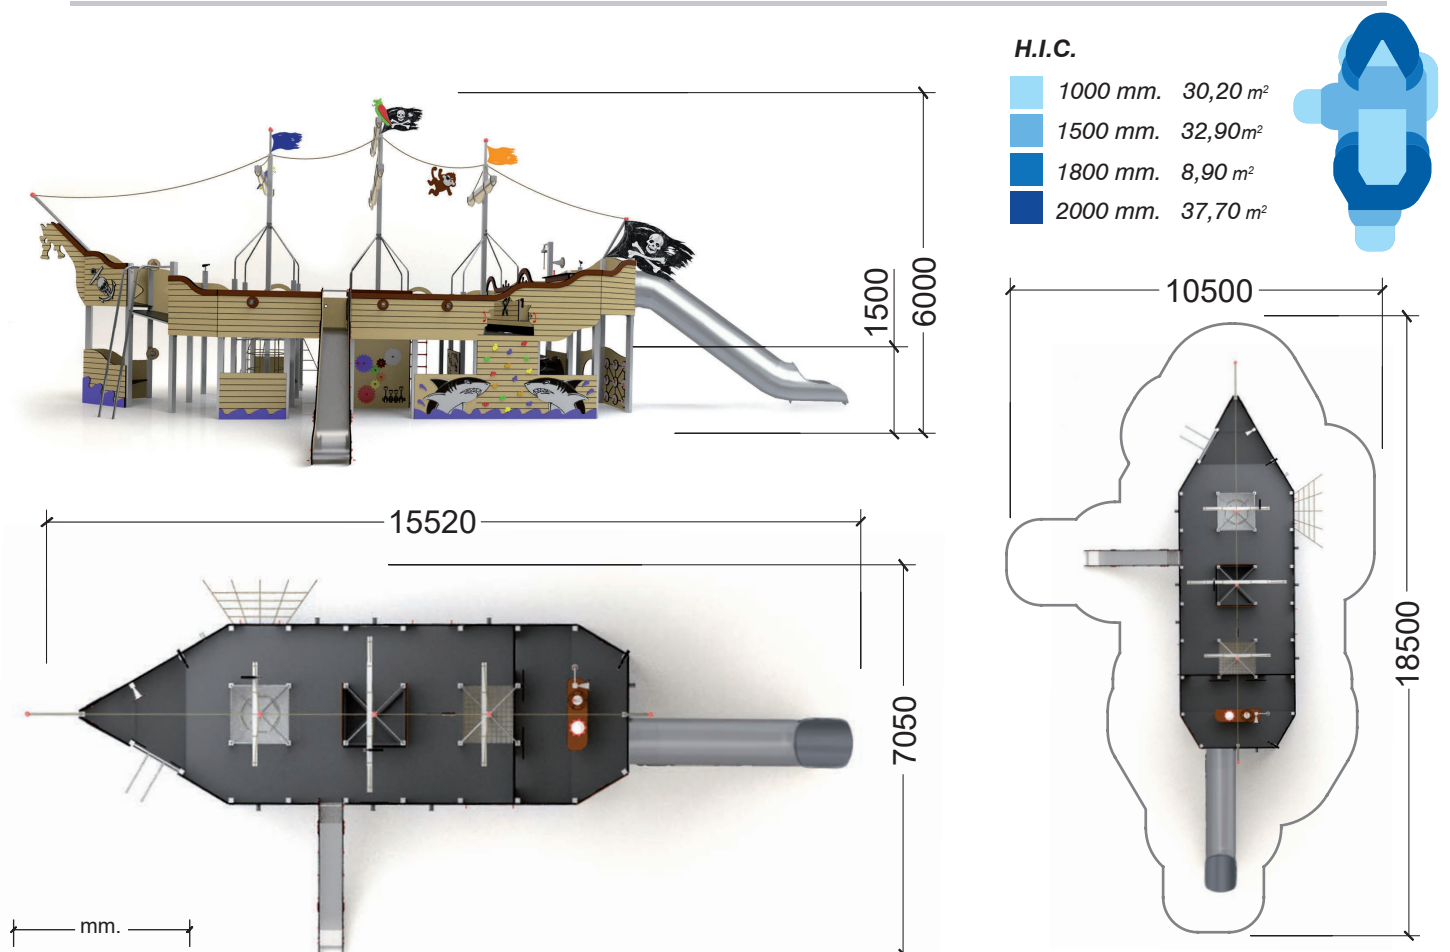

The play combination disposes of two floors: the ship's deck and the ground floor. Three ship's masts, - mainmast, foremast and mizzenmast, - bowsprit, figurehead and the ship's cladding design with boards convey the authentic feeling of navigating the world's oceans.

The inner area of the pirate's galleon is completely accessible and generates a refuge for the pirate kids. Here we can find a porthole with creep tube, two hammock swings and in the corner of the ship's bow a retreat to sit down. Activity panels with gearing wheels, pairs, labyrinths, 3-in-a-row and photocall make up the walls of the ship's cabin. Two tube phones communicate with the ship's deck.

On deck, there's the command bridge with navigation table, compass, moveable steering wheels, bell, telescopes and cannons. The deck platforms are elevated towards bow and stern. Integrated in the deck floor, there's a horizontal rope net where adventurous kids can cross a shaky ground. In addition, it allows the children from above and below to visually communicate with each other.

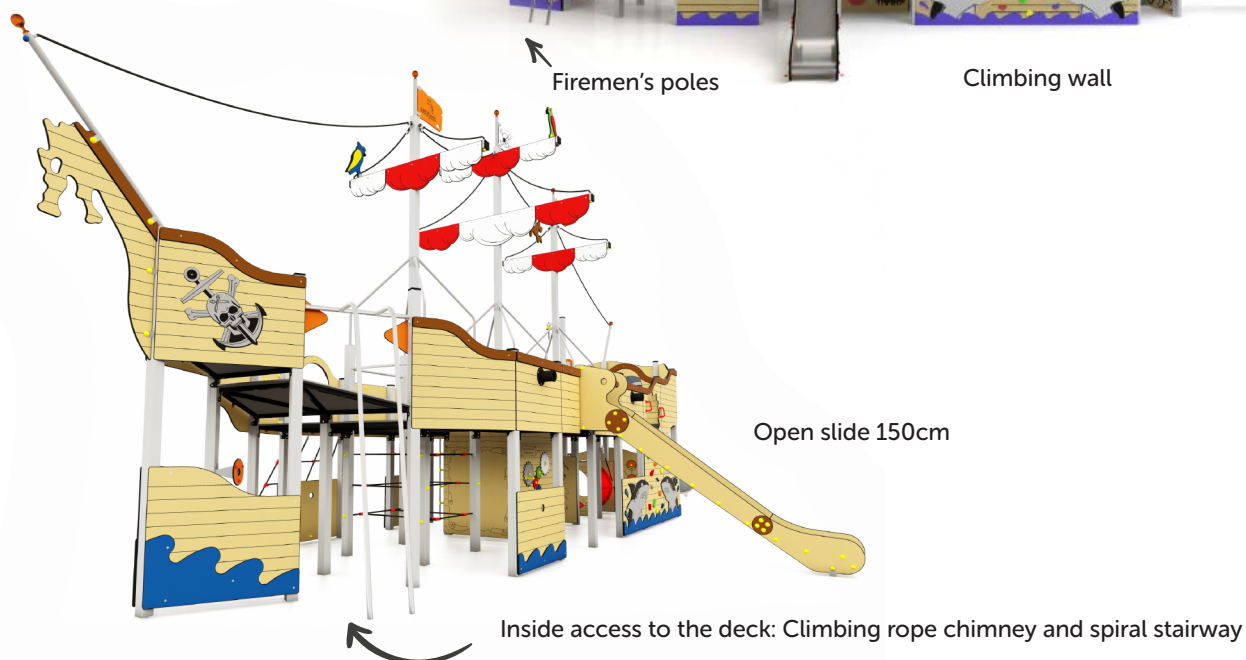

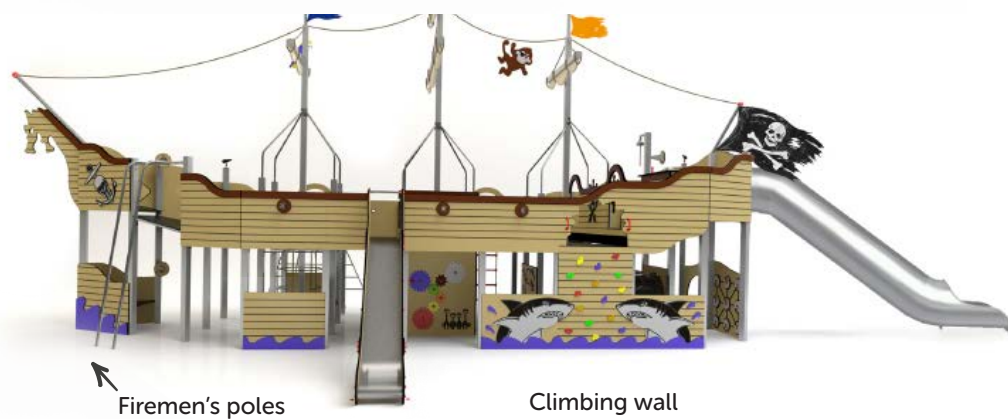

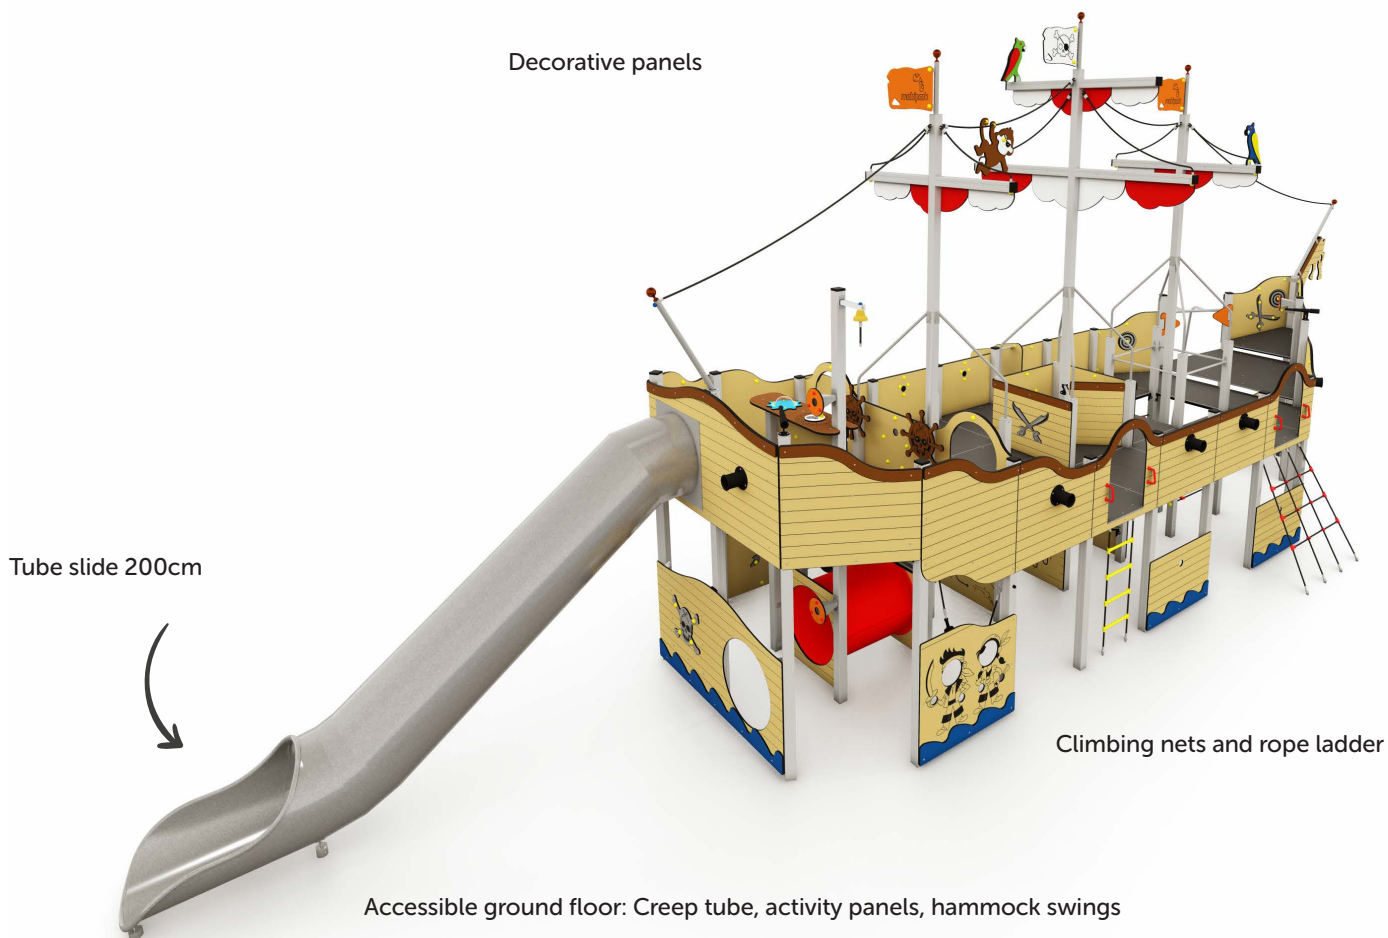

The access to the deck can be realised in different climbing ways: by a climbing wall, an inclined rope net, a ladder and a vertical rope chimney. Apart from the climbing accesses, the pirate's galleon is provided with a spiral staircase with stepped platforms in order to allow children with reduced mobility to ascend to the ship's deck and also parents to accompany younger children.

The descent may be realised through the same access ways or much faster through the "emergency exits": firemen's poles, a tube slide of 2m and an open slide of 1,50m. Elements like flags and parrots complete the atmosphere. Emblem customizable by engraving or labelling.
