265 kg.

Pirate themed play structure composed of a creep tube and of activity panels that constitute a boat. Play combination on floor level with accessibility from outside and from the inside.

The porthole and the creep tube promote motor skills. Activity panels "pairs" and "3-in-a-row" foster thinking. Pirates theming with original details as skull and crossbones, several fish species and a pirates photocall stimulate creativity and imagination. The cosy boat format with walls built of panels, the inner space which makes possible the participation in the wheelchair and a seat platform in the ship's bow create a meeting place that invites to socialize and to role play.

Play structure made of high quality materials, great resistance, long durability and low maintenance. Screws made of galvanised / stainless steel and hidden by nylon coverings. Installation of the posts with ground sleeves of hot-dip galvanised steel.
