Multi-activity pirate tower with platforms at different level from 0,40m to 1,50m height. Access to the tower with a transference platform where children with wheelchairs may transfer from their wheelchair to the play structure. Further accesses via a perforated climbing panel and a climbing ladder. Descent over the same access elements or by two slides. One slide of height 90cm, the other one an inclusive wide slide of height 58cm. The extra width of this slide allows children with reduced mobility to slide down together with somebody else.

The wide platform in the lower part of the tower invites to get together or to retreat. This meeting place, the tube phones and the scenery inspire imagination, communication and role play. The upper part of the tower serves as lookout. Children can manipulate the steering wheel, wind rose, gears, rattle, bell and telescope. Other details like cannon, pirate flag, monkey and parrot complete the play equipment.

Play structure made of high quality materials, great resistance, long durability and low maintenance. Screws made of galvanised / stainless steel and hidden by nylon coverings. Installation of the posts with ground sleeves of hot-dip galvanised steel.
