Pirate ship "Poseidon" is a multi-activity play structure for a wide variety of physical, sensory, cognitive and social/emotional play activities with no limits for children's creativity and imagination. Ship composed of bow and stern interconnected via a horizontal climbing ladder. Platforms at different level up to 1,50m height with accesses of different degrees of challenge: perforated climbing panel, inclined climbing net, climbing ladder and climbing wall. Furthermore, in the bow we can find a transference platform where children with wheelchairs may transfer from their wheelchair to the play structure and in the stern there is a spiral staircase with stepped platforms to also allow children with reduced mobility to ascend to the upper part of the play equipment and also adults who accompany younger children. To leave the ship, the children can use the same access ways or the much faster sliding "emergency exists": double firemen's poles and three slides of different heights 150cm, 90cm and an inclusive wide slide of height 58cm. The extra width of this slide allows children with reduced mobility to slide down together with somebody else.

Pirate ship "Poseidon" provides several meeting places to get together or to retreat. Two pairs of tube phones communicate with the ship's deck. The children can manipulate the activity panels with games about animals and colours, ship racing, labyrinths, two moveable steering wheels, wind rose, gears, spiral, rattles, bells and telescopes. Other setting elements such as a mast with sails, flags, cannons, bull's eye, skull and crossbones, monkey and parrots complete the play equipment. Play structure made of high quality materials, great resistance, long durability and low maintenance. Screws made of galvanised / stainless steel and hidden by nylon coverings. Installation of the posts with ground sleeves of hot-dip galvanised steel.
