QUARTZ is a configuration of **four modules**, positioned symmetrically on two levels. It is a balanced and visually appealing structure, ideal for encouraging cooperative play from multiple access points. The symmetrical layout promotes circulation and interaction among children, allowing for parallel climbing routes that invite shared play and back-and-forth dynamics.

The **ROCKS** range offers climbing wall structures designed to encourage active play, coordination and physical development in children through climbing. Each module is manufactured with a robust galvanised steel structure and polyester powder-coated finish, and 19 mm thick high-density polyethylene (HDPE) panels, materials that are highly resistant to intensive use and outdoor conditions.

The climbing holds allow children to tackle small physical challenges in a fun way, developing strength, balance and strategic thinking as they explore different climbing routes. The interior of the modules features climbing ropes that facilitate access and expand the possibilities for play, promoting physical activity and exploration from multiple angles.
