RUBY is the extended configuration of the range, combining three different modular sets – CORAL, JADE and OPAL – joined by a walkway with side ropes and a ø60.3 mm stainless steel tube.

- **CORAL** forms a three-module spiral structure that encourages three-dimensional exploration. It features an inclined rope climb and double fireman's pole on either side.
- **JADE** stands out for its vertical design of three modules with a 240 cm straight polyethylene tube slide and a fireman's pole ladder to test coordination and strength.
- **OPAL** is the compact module that acts as a link between the two sets.

The **ROCKS** range offers climbing wall structures designed to encourage active play, coordination and physical development in children through climbing. Each module is manufactured with a robust galvanised steel structure and polyester powder-coated finish, and 19 mm thick high-density polyethylene (HDPE) panels, materials that are highly resistant to intensive use and outdoor conditions.

The climbing holds allow children to tackle small physical challenges in a fun way, developing strength, balance and strategic thinking as they explore different climbing routes. The interior of the modules features climbing ropes that facilitate access and expand the possibilities for play, promoting physical activity and exploration from multiple angles.
